

NF1203

NANO-fluid Metal/Chrome

- Anti fingerprint
- Long-term protection
- Easy cleaning
- No cleaner
- Hygienic cleanliness
- Protects the environment

NR1203 chrome & high-grade steel is a new two-way product (cleaning and sealing) of the modern NANO-technology, which on almost all metal surfaces shows a very good, long sustained behaviour to drip off aqueous, oily liquids. Also dirt and lime residuals do not cling. For the cleaning is, if at all, only water without aggressive cleaning agents necessary. The fluid increases the hygiene, saves money and preserves the environment.

Areas of application:

Stainless steel kitchen-sinks, kitchen fronts from stainless steel or chrome, stainless steel hand rails, chrome armatures, chrome and stainless steel ornaments, stainless steel linings (elevators etc.) Brass and copper surfaces.

Application:

The surface must be as dry as possible and free of soilings.

1. shake the bottle well before using
2. bedabble the fluid evenly on the surface
3. let the fluid approx. 10 minutes act upon
4. furbish the surface with (NADICO) polishing cloth
5. NANO-effect place themselves after approx. 30 minutes

Do not use under 5°C or direct sun exposure!

Spezifikationen	Metal / Chrome Cleaner / Sealing (2 in 1)
dilution consumption indications drying/film strength storage temperature	use only undiluted approx. 20 – 30 ml per m ² min. 30 minutes, superiorly 2 hours + 5°C bis + 25°C, protect against direct sun exposure and frost, store well locked in the original bundle
